Mrs. Lisa Glademoore
Senior Data Scientist
Applied Information Insurance
687 W. York Street, Westing, Connecticut 60894

Dear Mrs. Glademoore,

I was very pleased to find your job advertisement on Glassdoor.com, and I am writing to apply for the data scientist position at Applied Information Insurance. I am a veteran product manager with 7 years of success in the industry, and I am working towards a master's degree in management and information systems. My education, successful track record, and love for data make me the top candidate for this position.

I am presently employed by Johnson & Terry Analytics as a product manager. I have opened many doors for my career as a product manager, but I find myself gravitating towards the numbers and charts associated on the fringes of my current job responsibilities. I decided to jump headfirst into this passion, and I've been able to help the data team with a fresh perspective on complex issues. At this stage, I fill a unique position as half product manager and half data scientist.

I've made a lot of people happy at Johnson & Terry, and I would be happy to go further into detail on that front. My greatest achievement, however, was setting a new standard for sharing data. I developed a new system that allows our team to quickly share up-to-date information across all company computers. My success made it indescribably easier for associates to stay in the know with the many breakthroughs of a typical data work day.

With a diverse industry upbringing, I have many unique skills that propel me in front of the other candidates. Most importantly, my computer science education has allowed me to understand data science on a theoretical level, beyond that of math or business students. Logical problems are easy for me to solve.

I fully anticipate that I will be the most qualified candidate for the position of data scientist at Applied Information Insurance. With a special background in computer science and information systems, I have a lot of unique skills to bring to the table. I look forward to meeting with you at your earliest convenience.

Sincerely,
Ronald Smith
