Ms. Jamie Garcia
HR Manager and Coordinator
West Valley Data Analytics
521 Baltic Avenue, Dallio, Vermont 48225

Dear Ms. Garcia,

I was happy to read your advertisement on Indeed.com, and I would like to apply for the data scientist position at West Valley Data Analytics. I have some experience in data analysis, forecasting, and interpretation, and I would like to move my career towards full-time work in the industry. Also, as a recent graduate with a master's degree in computer science, I bring a unique logical approach to the workplace.

I currently work as an intern at Datalytics Vermont. My day-to-day responsibilities include meeting with managers to create forecast reports, creating algorithms in Python and R programming languages, and developing anomaly detectors to ensure the efficiency of our agency's data. I believe these responsibilities are intense for an internship, and that I've been prepared extremely well for a transition into the full-time workforce. In fact, there are few distinct differences between my current position and a full-fledged entry-level position.

During my first year as an intern, I reached nearly all of my goals with Datalytics Vermont. My most important achievement, however, was creating a new method for graph and chart creation among interns and junior Python developers. With the rest of my teammates, I improved our company's capacity for drawing breakthrough conclusions from encrypted data. I would be thrilled to bring the important parts of these new methods to new places in my career. Despite hitting all my marks through my first year, I have new goals that I'm striving toward now.

Aside from my direct experience in data science, I have held a number of jobs that have taught me basic life skills. For example, my several years as a customer service representative helped me develop my capacity for interacting with important clients. That skill comes in handy on a regular basis at Datalytics Vermont. I pride myself in using data to create custom solutions for business owners and individual clients.

I am certainly an ideal candidate for the data scientist position at West Valley Data Analytics. I would view the position as an opportunity for immense personal and professional growth. More

importantly, my internship experience and education would help me to quickly grow into a valued member of the data team.

Sincerely,
Henrik Forsberg
